

Commander

Automate Tasks and Take Charge of AP Processing

Benefits

- Save time by adding workflows to any type of report
- Affordable and easy to use
- Seamless integration with Sage 300 CRE

TimberScan Commander is a document automation tool that brings reports from Sage 300 CRE into TimberScan, by Core Associates. Commander offers additional power by adding workflows to documents such as purchase orders, contracts, leases, and accounts receivable invoices by embedding 'invisible' instructions. When you're ready to export your Sage 300 CRE reports, use the Print function and Commander will execute tasks for your specific documents.

Many construction and real estate AP professionals use TimberScan Commander to have a batch of change orders automatically emailed to specific vendors with matching subject lines. Their change orders flow seamlessly into TimberScan as fully coded, searchable, and viewable supporting documents that can also be stored in Sage 300

CRE as an attachment on single or multiple records.

Commander can enable immediate document indexing to TimberScan, too, with the added bonus of reducing manual data entry burdens. Set up is simple — please refer to the Technical Requirements for TimberScan. Affordable and easy to use, Commander delivers a quick return on investment!
