

Capture

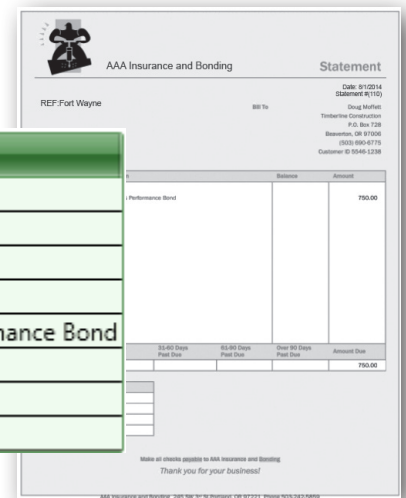

Optical Character/Text Recognition Means Less Data Entry

Benefits

- Reduced data entry errors
- Less processing time for each invoice
- Easy to learn and implement
- Seamless integration with Sage 300 CRE

Many companies process hundreds, even thousands, of invoices every month. Managing them accurately in Sage 300 CRE can be time-consuming and prone to data-entry errors. Often, these invoices come in batches forcing overtime and increasing stress levels in overburdened accounts payable departments.

Field	Value
Identifier	REF: Fort Wayne
Invoice Number	Statement #[100]
Invoice Date	8/1/2014
Balance Due	750.00
Description	Payment & Performance Bond
Job	
Commitment	

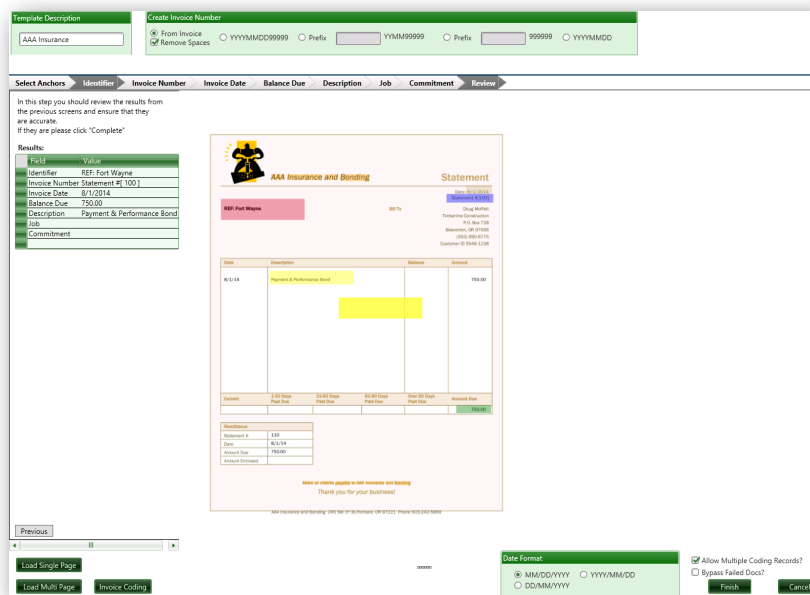

**TimberScan
Capture significantly
reduces data entry and
AP burdens.**

TimberScan Capture converts scanned images to coded invoices in TimberScan, by Core Associates, using Optical Character Recognition, or OCR, to help alleviate AP burdens. Capture identifies the exact location of key data elements on scanned invoices, such as vendor name,

invoice number, date or amount, and creates the TimberScan invoice for a paperless routing and approval experience.

With Capture, you can easily create invoice templates using a menu-driven program, too. Once a vendor's invoice structure is set up and saved as a template, the next invoice from that company will be recognized automatically, and the data will be identified and placed correctly in the coded TimberScan invoice. Capture also supports multiple template profiles for a single vendor.

By converting scanned images into coded, TimberScan invoices, Capture can help reduce data entry time and effort by up to 90%.

Technical Requirements

Please see the TimberScan datasheet for system requirements including server size, disk space, etc.
