

## The Mobile Experience for TimberScan Users On-The-Go

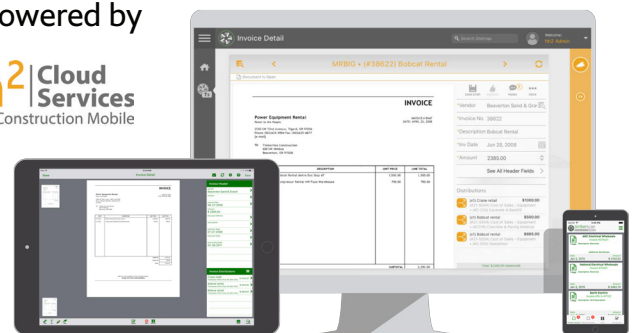

### Benefits

- Paper-free routing and approval
- Full offline capabilities
- Native iOS & Android App
- Invoice coding, annotation, and approval
- Easy implementation

Construction and real estate professionals are frequently on the go – moving from the office, to meetings, to various job sites. Backoffice and field workers in CRE simply need mobile tools to get their work done.

Designed in collaboration with hh2 Cloud Services to run on all the popular mobile devices, including Android and iOS platforms, TimberScan Mobile is the app that allows TimberScan users to review, edit, and approve invoices from virtually anywhere. As soon as an invoice is processed in TimberScan, by Core Associates, a notification can be sent to mobile users on their tablet; invoices are downloaded seamlessly in the background. No Wi-Fi? No problem – TimberScan Mobile will automatically sync the next time the device goes online.

powered by

Because TimberScan Mobile resides in the Cloud, it's able to offer services that are located at a professional-grade data center, maintained and monitored 24/7. A sync tool installed on your Sage 300 CRE server maintains constant contact with TimberScan and the data center.

# Technical Requirements
