

Core Cloud Systems

Three Way Match for Better Invoice Controls

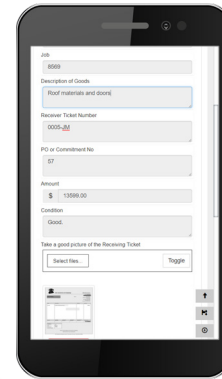

Make Purchase Requests or Initiate POs from the Field

Route and Approve Purchase Orders

Enter/Submit Receiving Tickets in the Field

Easily match your invoices to purchase orders and receiving tickets from your TimberScan®, Sage, or other system.

Core Cloud Systems (CCS) makes it easy to create and route POs then document material receipt data from virtually anywhere. Field personnel are empowered with an easy to use system that's paper-free and loaded with automation that helps minimize administrative efforts.

Data from CCS syncs directly into TimberScan and other management systems to execute a three way match that helps better control expenditures by highlighting any inconsistencies. Finalize and store documents directly in these systems for an easy, fully connected experience.
